

EBM 2022

XX Annual Conference on
Evidence Based Management of Cancers in India

**Contemporary Management of
Lung Cancer: Hope to Reality**

25th - 27th February 2022

Pre conference workshop on
“GERIATRIC ONCOLOGY IN LUNG CANCER”

Thursday 24th Feb, 2022 | 1:00 pm to 5:00 pm

With the average life expectancy of Indians being about 68 years, we expect a significant proportion of patients with cancer to present at an older age. These patients have multiple co-morbidities, are on numerous medications and may also have myriad vulnerabilities. Given the challenge in treating older patients with cancer, a formal, comprehensive geriatric assessment will be helpful to risk stratify and devise optimal treatment strategies to improve oncological outcomes.

This workshop will impart insight into the evaluation and management to these patients. By bringing together all stakeholders: clinicians, pharmacologists, physiotherapists, social workers, palliative care specialists, psychiatrists and counsellors, this workshop will provide integrated information to the audience.
